Question 1 | Correct Mark 1.00 out of 1.00

Write a Program to Implement the Quick Sort Algorithm

Input Format:
The first line contains the no of elements in the list-n
The next n lines contain the elements.

Output:
Sorted list of elements

For example:

Input	Result
5 67 34 12 98 78	12 34 67 78 98

Answer:

```c
#include <stdio.h>
#include <stdlib.h>

// Function to swap two integers
void swap(int *a, int *b) {
    int temp = *a;
    *a = *b;
    *b = temp;
}

// Partition function for Quick Sort
int partition(int arr[], int low, int high) {
    int pivot = arr[high]; // Choosing last element as pivot
    int i = low - 1;

    for (int j = low; j < high; j++) {
        if (arr[j] <= pivot) { // Elements less than or equal to pivot
            i++;
            swap(&arr[i], &arr[j]);
        }
    }
    swap(&arr[i + 1], &arr[high]);
    return i + 1;
}

// Quick Sort function
void quickSort(int arr[], int low, int high) {
    if (low < high) {
        int pi = partition(arr, low, high);
        quickSort(arr, low, pi - 1); // Sort left side
        quickSort(arr, pi + 1, high); // Sort right side
    }
}

int main() {
    int n;

    // Read number of elements
    if (scanf("%d", &n) != 1 || n <= 0) {
        printf("Invalid input. Please enter a positive integer for n.\n");
        return 1;
    }

    int *arr = (int *)malloc(n * sizeof(int));
    if (!arr) {
        printf("Memory allocation failed.\n");
```

```
47          return 1;
48      }
49
50      // Read elements
51      for (int i = 0; i < n; i++) {
52          if (scanf("%d", &arr[i]) != 1) {
```
